

Ethiopian Coffee Association

EUDR Checklist | Ethiopian Coffee Exporters

Ensure full traceability to farm plots with GPS coordinates, verify no deforestation after 31 Dec 2020, and retain evidence of legal production and export for every shipment.

I

Traceability

Can you trace each export lot back to farms?

- ☐ Every export lot has a list of farmers and farms/plots it came from
- ☐ You can show a clear path:
Farmer → Cooperative/Washing station → Warehouse lot → Export shipment
- ☐ You don't mix unknown coffee into lots going to the EU

2

Farm location (geolocation)

This is the main EUDR requirement

- **For every farm/plot that supplies the EU shipment, you have:**
 - ☐ GPS coordinates (best: polygon boundary, acceptable: point)
 - ☐ Farmer name/ID and plot ID
 - ☐ You can export the farm coordinates as a file (CSV, Excel, etc.)

3

Deforestation rule (simple test)

- ☐ **You confirm:** No coffee comes from land deforested after 31 Dec 2020
- ☐ If the farm is near forests, you keep extra evidence (field visit / satellite check from buyer)

4

Legality

Basic proof that production/export is legal

- ☐ Exporter business license + tax documents
- ☐ Cooperative/union registration (if applicable)
- ☐ Proof coffee was legally sourced (farm registration/membership records)

Deliver the “EUDR Data Pack” to your EU buyer**Every EU shipment should have:**

- ❑ List of plots/farms with coordinates
- ❑ Farmer/plot IDs linked to export lots
- ❑ Traceability records (lot creation + intake logs)
- ❑ Legality docs (licenses/registrations)
